ABSTRACT

The participation and performance of 11th and 12th grade Texas public school district students in the College Board's Advanced Placement (AP) and International Baccalaureate (IB) Organisation courses and examinations during the 1996-1997 school year were investigated. The number of students taking the AP and IB examinations was higher than in previous years, as was the number of schools with AP examinees. Participation rates for Hispanics and African Americans continued to climb, but still lagged behind those for Whites and Asian Americans. The rate for females continued rising faster than that for males. Performance, as measured by the number of AP examinations in the 3-5 score range and number of IB examinations in the 4-7 range was highest in 1997, improving steadily since 1995. Performance as measured by the percentage of AP examinations in the 3-5 score range declined from 60.6% in 1996 to 58.7% in 1997, a result partly due to the rapid increase in the number of AP examinees. Asian American, Native American, and White students continued to outscore African Americans and Hispanic Americans on AP and IB examinations. Comparisons of AP results to other states and the nation were also drawn for all Texas public and nonpublic school students. The dramatic increase in state funding for the Texas AP/IB Incentive Program in the 1000-1001 biennium, as well as finding available through federal and local incentive programs, should provide many necessary supports for substantially increasing the number of Texas high school students taking AP and IB courses and examinations. Appendixes contains summary tables, results by district, and results by district analysis categories. (Contains 24 tables, 3 figures, and 55 references.) (Author/SLD)

Texas Education Agency Austin, Texas February 2000

Citation. Texas Education Agency. 2000. 1996-97 Advanced Placement and International Baccalaureate Examination Results in Texas. Publication Number GE00-601-03. Austin, TX: Texas Education Agency.

Abstract. The participation and performance of eleventh and twelfth grade Texas public school district students in the College Board's Advanced Placement (AP) and International Baccalaureate Organisation's (IBO) courses and examinations during the 1996-1997 school year was investigated. Both the number of Texas AP and IB examinees was higher than in previous years, as well as the number of schools with AP examinees. Participation rates for Hispanics and African Americans continued to climb but still lagged behind those for Whites and Asian Americans, while the rate for females continued rising faster than that for males. Performance as measured by number of AP exams in the 3-5 score range and number of IB exams in the 4-7 range was highest in 1997, improving steadily since 1995. Performance as measured by the percentage of AP examinations in the 3-5 score range declined from 60.6 percent in 1996 to 58.7 percent in 1997, partly due to the rapid increase in the number of AP examinees. Asian American, Native American, and White students continued to outscore African Americans and Hispanics on AP and IB examinations. Comparisons of AP results to other states and the nation were also drawn for all Texas public and non-public school students. The dramatic increase in state funding for the Texas AP/IB Incentive Program in the 2000-2001 biennium, as well as funding available through federal and local incentive programs, should provide many necessary supports for substantially increasing the number of Texas high school students taking AP and IB courses and examinations.

PREFACE

This is the first report detailing the results of Texas public school district students on the College Board's Advanced Placement (AP) and International Baccalaureate Organisation's (IB) examinations. Yearly reports, describing course and examination participation and examination performance during the previous school year, as well as selected trends, are planned. Comparisons of AP results also were made among all examinees (from both public and non-public schools) in Texas, the nation and other states. Growth in the number of examinees, especially AP examinees, has been increasingly more rapid since 1994-95 – the year legislation partially funding the Texas AP (now AP/IB since 1995-96) Incentive program went into effect.

In 1996, AP performance and participation data was adopted as a report-only indicator for the Academic Excellence Indicator System (AEIS) by the State Board of Education. In 1998, this indicator was defined and reported as the unduplicated, or combined, AP and IB participation (one measure) and performance (two measures) for both examinations and examinees at the district, region, and state levels (cf. TEA, 1998b). In most cases, (excepting the 10 districts statewide with both AP and IB participation in 1996-97), the indicator represents AP participation and performance only.

ACKNOWLEDGMENTS

This report was prepared by the Texas Education Agency's Research and Evaluation Division to promote understanding of the extent to which the College Board's Advanced Placement (AP) and the International Baccalaureate (IB) Organisation's IB Programs of courses and examinations can benefit students, their teachers, and the colleges and universities they attend. By focusing on AP and IB examination results, information is provided that, in large part, can be used in evaluating how well potential benefits of the two programs are being realized statewide, as well as between and within schools and districts.

A debt of gratitude is owed to Educational Testing Service (ETS) staff for providing the College Board's Texas public high school AP examination data and to IBO staff in Cardiff, Wales, Great Britain for the Texas public high school IB examination data. These data were used in many of the report's analyses. In addition, staff in the College Board's Southwestern Regional Office, the IBO's North American Office, and in TEA's Advanced Academic Services Division facilitated or contributed either by providing necessary information for the report or with feedback on the document in draft.

EXECUTIVE SUMMARY

In 1996-97, 37,563 students in 834 Texas schools (public and non-public) took 62,318 Advanced Placement (AP) examinations, according to College Board reports. This put Texas *third* in the nation, behind California and New York, in the number of AP examinees and examinations. Texas, at 56.3 percent, also was above the nation (52.9%) in the percentage of schools with AP examinees. Although there have been increasing numbers of Texas students taking AP examinations since 1986-87, the numbers began rising at an even more rapid rate in 1994-95, the year legislation partially funding the Texas AP [now AP/IB] Incentive Program went into effect. (Funding also applies to International Baccalaureate, or IB, examinations effective from 1995-96.)

While the percentage of AP examination scores of 3, 4, or 5 earned by Texas students has remained below the national percentage since 1994-95, the *number* of examinations scored 3-5 rose to its highest value yet in 1996-97. In 1997, Texas students scored 3 or higher on 37,526 AP examinations—60.2 percent of all examinations taken. Nationally, 64.5 percent of examinations had scores of 3 or higher. Generally, colleges will award students credit, advanced placement, or both upon enrollment for scores of 3, 4, or 5 on AP examinations in corresponding college courses. Thus, *a greater number of Texas students in 1997 than ever before had a greater number of AP examination scores than ever before* that qualified potentially for college course placement or credit.

Similarly, but on a much smaller scale, 619 Grade 11-12 students in 12 Texas public schools took 1,481 of the International Baccalaureate Organisation's IB examinations in 1996-97, according to Texas Education Agency (TEA) analyses of IB data. These numbers are up somewhat from 1994-95, when 429 students in 11 Texas public schools took 910 IB examinations. Texas students earned scores of 4, 5, 6, or 7 on 76.0 percent (1,126) of 1,481 examinations taken in 1996-97—up from 74.7 percent (or 680 examinations) in 1994-95. Of the colleges that recognize IB scores, students generally are awarded credit or advanced placement in corresponding college courses for IB scores of 4-7.

More schools and districts are participating in the AP and IB programs, and more students are taking the examinations and making high scores, especially for AP. More students are also completing AP, IB, and other TEA-defined advanced courses. Taken together, these trends should contribute ultimately to increases in the number of Texas graduates who complete the more difficult course requirements of the Recommended and Distinguished Achievement high school diploma programs.

While the *most important* factor is whether or not students in AP or IB courses are experiencing subject-specific, college-level learning, performance on the AP and IB examinations is the result of objective, external standardized measurement of how well students are likely to perform in the same courses taken in college. The quality and rigor of the advanced courses, the effectiveness of the teaching, and increased student access to the AP or IB courses and examinations must be combined before these important college-level learning experiences can occur. Funding available through state, federal, and local incentive programs can help in providing some of the supports necessary for an increasing number of high school students to experience such high-level academic learning.

TEXAS PUBLIC SCHOOL HIGHLIGHTS

Selected Participation and Performance Trends

- From 1995 to 1997, the percentage of 11th- and 12th-graders in Texas public schools taking AP examinations rose from 6.8 percent to 8.5 percent.
- The percentage of AP examinees and examinations with scores of 3-5 slipped from 1996 to 1997 by less than 2 percentage points—from 62.6 to 61.7 percent for examinees and from 60.6 to 58.7 percent for examinations. In contrast, the percentage of Texas IB examinees earning scores of 4-7 went from 79.7 percent in 1996 to 85.9 percent in 1997; the percentage of examinations with scores of 4-7 rose from 73.4 to 76.0 percent.
- Grade 9-12 AP examinees who also completed at least one AP course rose to 70.5 percent in 1997 from 56.4 percent only 2 years earlier, according to TEA analysis of AP data and Public Education Information Management System (PEIMS) course data. In addition, 9 out of 10 AP examinees tested in 1997 completed some type of TEA-defined advanced course that year. AP examinees who completed the corresponding AP courses in the same year continued to outscore examinees not completing the corresponding courses.
- Just over half (523) of the 980 Texas public school districts with Grade 11-12 enrollment had students who took at least one AP examination. Nine of these 523 districts also had students who took one or more IB examinations.
- School districts with the highest 1997 AP examination participation (above 9.0% of students tested) tended to be in four major urban/suburban education service center (ESC) regions of the state: Austin, Fort Worth, Houston, and Richardson. In addition, district AP participation and performance generally tended to increase along with increases in other performance measures such as percentages of: students passing all TAAS tests taken, graduates taking the SAT I or ACT, and examinees with scores of at least an 1110 SAT I Total or 24 ACT Composite. District AP participation and performance also increased as district average teacher salaries increased.
- ***Ethnic group participation and performance trends.*** Clearly, issues of ethnic minority group (especially African American and Hispanic) access to, and performance on, AP and IB examinations and courses call for continued attention in the state's and nation's schools.
 - ◆ Although the participation rate for Texas Hispanics and African Americans has been climbing steadily over the past three years, only 5.2 percent of Hispanics and 3.2 percent of African Americans took a 1997 AP examination. By comparison, 10.7 percent of Whites and about one-quarter (25.3%) of Asian Americans took an AP examination that year. Growth in participation rates also has been less rapid for Hispanics and African Americans than for Asian Americans and Whites, while the rate for Native Americans has fallen.
 - ◆ Similar to AP participation, Texas public school Asian Americans had the highest IB examination participation rate from 1995 to 1997 on a percentage basis (almost 1.0%) among all ethnic groups. They also exceeded *in number* (112) both African American (61) and Hispanic (31) IB examinees.

- ◆ Compared to 1995 results, percentages of Texas public school AP examinees scoring 3-5 dipped slightly in 1997 for all ethnic minority groups, as did the 3-5 examination score percentages, while the percentages for Whites rose slightly. From 1995 to 1997, nearly three-fourths of Asian American examinees received 3-5 scores, followed by about two-thirds of Native Americans, nearly two-thirds of Whites, over half of Hispanics, and around one-third of African Americans.
- ◆ Similar to AP examinees, Asian Americans as a group (at 96.4% in 1997) had the highest percentage of Texas IB examinees scoring 4-7 from 1995 to 1997, followed by Whites (91.2%), Hispanics (77.4%), and African Americans (34.4%). In contrast to AP results, IB examinee percentages with 4-7 scores increased for all groups from 1995 to 1997.
- ***Female and male participation and performance trends.*** The expanding gap between males and females participating in AP and IB examinations, as well as the declining percentage of males with 3-5 AP scores, raises questions about the reasons for these trends.
 - ◆ From 1995 to 1997, the percentage of Texas Grade 11-12 female students taking AP examinations increased by 1.9 percentage point; participation for males only increased by 1.4 percentage point. Also, the percentage of female examinees with 3-5 scores remained relatively steady (60.5% in 1995 and 1997), while the percentage of male examinees earning such scores declined by 1.6 percentage point. Females exceeded males in the ***number*** of examinees earning 3-5 AP scores due, in part, to the higher number of female examinees.
 - ◆ Similar to AP participation, a greater number of Texas females (358) than males (257) took 1997 IB examinations, and the participation gap between the two grew larger since 1995. While a higher percentage of female IB examinees than males achieved 4-7 scores in 1995 only, a higher ***number*** of females than males achieved 4-7 scores from 1995 to 1997.

INTRODUCTION

This report includes background and general descriptions of the College Board's Advanced Placement Program (AP Program) and the International Baccalaureate Organisation's Program (IB Program) of college-level courses and examinations for high school students. Included in the background descriptions are interpretative issues regarding examination score scales, access to the courses and examinations, and specific uses and benefits associated with the courses and examinations. Data sources and the various types of definitions for commonly reported measures are described. Details follow, showing the 1996-97 AP and IB results and trends for the examinations and courses. Evidence for improved access to the AP and IB programs is summarized, as well as the status of examination performance and the extent to which students are prepared for college.

Report purposes are threefold. A first purpose is to promote an understanding of the AP and IB programs and of the diversity existing among high school students who attempt advanced academic challenges while still in high school. A second report purpose is to promote an understanding of the diversity existing among Texas districts in AP and IB program participation and examination performance. A final report purpose is to suggest areas for educational consideration or action for students, teachers, schools, and communities.

GENERAL DESCRIPTION OF AP AND IB PROGRAMS

Advanced Placement (AP) Program. The AP program is a cooperative educational endeavor between secondary schools and colleges and universities. High school students who participate in AP courses are exposed to college-level material and are challenged to complete more rigorous assignments. By doing so, students gain valuable skills in problem analysis, writing, studying, and examination preparation. Many students choose to demonstrate their mastery of the material by taking an AP examination (College Entrance Examination Board [CEEB] & Educational Testing Service [ETS], 1994a), although students can take the examinations without having taken AP courses.

Colleges and universities can grant credit, placement, or both to students who have qualifying scores (CEEB, 1996a). Generally, colleges will award credit or advanced placement for scores of 3, 4, or 5 on AP examinations, although a few colleges and universities grant credit in some courses for scores of 2. (See Table A-1 on page 29 in Appendix A for verbal descriptions of scores on the 1-5 AP grading scale.) Each year, the AP Program presents several types of AP Scholar Awards, tied to graduated levels of achievement, to students who perform well on three or more AP examinations (CEEB, 1997a). Students are awarded certificates and their achievements are acknowledged on AP score reports sent to colleges in the following fall (CEEB, 1999).

Sufficiently high scores on AP examinations also can be used to obtain the Advanced Placement International Diploma for overseas study. This component of the AP program is intended to certify the achievement of AP candidates whose higher education plans include the prospect of enrolling in a university outside the United States or Canada. The designation is not a substitute for a high school diploma; it merely acknowledges that the recipient has earned grades of 3 or higher on a specified number of AP examinations from a prescribed set of courses (CEEB, 1997c).

Since the program's inception in 1955, approximately 6 million students have taken nearly 9 million AP examinations worldwide. From 1987 to 1997, the total number of students in the U.S. taking an AP examina-

tion increased from 258,984 to 566,720, and the total number of AP examinations taken increased from 364,481 to 899,463 (CEEB, 1997e). On average, 65 percent of those who take an AP examination receive a grade that is accepted for college credit, advanced placement, or both. Almost 53 percent of U.S. secondary schools currently participate in the program (CEEB, 1997d) (see Table A-2 on page 30 in Appendix A).

AP courses and examinations. AP courses are developed locally, based on course descriptions and other materials provided by the College Board to interested schools. AP teachers typically supplement textbook and College Board course description materials with other materials, special studies, student presentations, and other student performance activities (CEEB, 1993). In addition, instructional approaches used in AP courses can include student-centered seminars with student presentations, instructor-guided discussion on supplementary readings, laboratory activities, field investigation activities, and outside projects.

Annual AP examinations are developed by committees that include discipline experts from college faculty and teachers of the relevant high school AP courses. Development periods for annual examinations span two or more years. The development committees also formulate AP course descriptions in each subject area, which they review and revise every two years to ensure that current thinking about course content and instructional reforms, such as technological advances are being reflected. In addition to these approaches to ensure the content validity of AP examinations, the AP program employs established educational measurement practices to ensure that AP grades (scores) are valid measures of college-level performance (CEEB & ETS, 1994a).

Each AP examination consists of two or more sections. In all but the AP Studio Art examination, which requires a portfolio of work from students, AP examinations include both multiple-choice items for breadth of content coverage and free-response items that allow students to demonstrate both their understanding in an area and the ability to organize and present ideas. Free-response items are presented in a variety of formats: essays, analysis of historical documents, audiotaped responses, extended problem solving, and case study management (CEEB, 1996b).

For three weeks in June of each year, several thousand faculty consultants, comprised of approximately half AP high school teachers and half university professors, convene at five sites throughout the U.S. to read and score the free-response answers written by AP examinees in May. The beginning of the three-week session is spent training the faculty consultants on the use of the scoring standards that have been developed that year by each examination's Chief Faculty Consultant and Test Development Committee. The application of the scoring standards is closely monitored by frequently pausing to revisit the standards, comparing the scores on the same question to ensure consistency among faculty consultants, and keeping track of each consultant's scoring pattern to watch for fatigue (CEEB & ETS, 1997a).

Table A-3 on page 31 in Appendix A shows 1996-97 AP examinations, corresponding AP courses offered in Texas public schools, and the most recent recommendations by the American Council on Education (CEEB & ETS, 1994a) for minimum college credit hours to be granted for AP examination scores of 3 or higher. The Texas Education Agency's Division of Academic Services (TEA, n.d.), maintains a sourcebook of college course credit hours granted by Texas public and private colleges and universities for specific AP and IB examination scores. Two new courses and examinations have recently been added: AP Statistics in 1996-97 and AP Environmental Science in 1997-98. The College Board will offer AP Human Geography course descriptions, associated materials, and an examination in the 2000-01 school year (CEEB & ETS, 1999).

AP Examination fees. For the 1996-97 academic year, the fee for each AP examination was \$73, of which the schools normally retain \$7. The College Board offers a \$22 per-examination credit to qualified students

with acute financial need. Schools are expected to forgo their \$7 administrative rebate for these candidates (CEEb, 1997b). With the \$22 College Board credit, the \$7 school rebate, and the \$25 fee reduction approved and funded by the Legislature (under the Texas Advanced Placement Incentive Program, Texas Education Code [TEC] §§28.052-28.054) for students with financial need, the potential cost for an AP examination was as low as \$19 in 1996-97. In 1998-99, additional sources of fee reductions from the federal government and the Texas AP/IB Incentive Program allowed financially needy students to pay as little as \$6 per examination (TEA, n.d.).

International Baccalaureate (IB) Program. The IB program is a comprehensive two-year curriculum for high school students 16-19 years old. Students in the IB program are encouraged to take one subject from each of six subject groups. Students generally take examinations in May of their junior and senior years or during the last two years of their IB programs. (A smaller November testing session is available for schools in the southern hemisphere.) Students may receive advanced placement or credit, or both, upon entering college. Colleges that recognize IB scores usually award credit, advanced placement, or both to students who score in the 4-7 range on IB examinations. (See Table A-1 on page 29 in Appendix A for verbal descriptions of scores on the IB 1-7 grading scale.) It is recommended that students contact the educational institutions they are interested in attending regarding specific policies on granting credit for scores achieved on IB examinations, as policies vary widely by institution.

Candidates numbering 27,469 of 167 different nationalities from 78 countries took the written IB examination papers in May 1997. From the 1996 to the 1997 testing session, there was an 11.0 percent growth internationally in student numbers and a 10.3 percent growth in the number of schools participating (IBO, 1997a). According to IB reports, each year 70-75 percent of all students internationally who attempt the diploma earn it (IBO, 1997c).

IB courses and examinations. Diploma candidates must follow a program including interdisciplinary courses and components, along with six courses from at least five subject areas. All candidates must complete the Theory of Knowledge (TOK) course; Creativity, Action, and Service (CAS) activities; and an extended essay project based on original, independent research. In addition, one course must be taken in each of five subject areas: Language A1 (first language), Language A2 (second modern language), Individuals and Societies, Experimental Sciences, and Mathematics. A sixth course may be chosen from a list of Arts and Electives, which also includes course choices from the five main subject areas and any school-based course with an IBO-approved syllabus. The six subject area courses are taken at either the Standard (or Subsidiary) Level (SL, representing 150 teaching hours) or Higher Level (HL, representing 240 teaching hours). Students must take at least three, but not more than four, subject area courses at the Higher Level. This allows students sufficient freedom to investigate favorite subjects in greater depth, while helping ensure that a broad curriculum is completed during a two-year period (International Baccalaureate Organisation [IBO], 1999).

To receive an IB diploma, a student must accumulate 24 of 45 total points across six IB examination scores in the required subject areas, plus satisfactory completion of the extended essay, TOK course and CAS activities. The maximum score of 45 points includes scores of 7 on each of the six subject examinations (42 points) and 3 bonus points for an exceptional essay and work in TOK. Students who fail to satisfy all requirements or elect to take fewer than six subject examinations are awarded a certificate for examinations completed with acceptable scores (IBO, 1999).

Evaluations of the quality of candidates' work is the responsibility of both classroom teachers and more than 3,000 examiners worldwide, who are led by chief examiners with international authority. A variety of assessment methods are used to evaluate both the content and the process of academic achievement, and to take into account different learning styles and cultural patterns. Conventional external examination techniques (essay,

short answer, multiple choice, etc.) are complemented by internal assessment of course work by the teachers responsible for evaluating students over the two-year period. Specialized forms of assessment appropriate to the nature of a given subject are used. Teachers' internal marks are assessed by the IB examiners to assure that consistent standards are used in all IB schools. A criterion-referenced grading system is used by the IBO, with each student's performance measured against well-defined levels of achievement consistent from one examination to the next. Top grades reflect attainment of knowledge and skills relative to set standards equally applied to all schools (IBO, 1997d).

IB Examination and school fees in 1997/98. For diploma candidates taking all six examinations in one session, the fee per student is \$125 plus \$65 for registration. For candidates seeking a certificate and not a diploma, the fee per student is \$70 plus \$45 for registration. For each examination at either the higher and standard levels, a \$48 fee applies. For each extended essay examination, a \$30 fee is applied. Schools pay a \$300 fee for diploma candidates taking the Theory of Knowledge test (IBO, 1997b). As has been the case for AP examinees, fee reductions for financially needy Texas public school IB examinees have been available through the Texas AP/IB Incentive Program. An additional fee reduction of about \$10 per examination was available in 1998-99 from federal funds for financially needy examinees (TEA, n.d.).

Schools wishing to participate in the IB program pay an application fee of \$2,500. Once authorized, schools then pay an annual subscription fee of \$7,300 to offer IB courses and examinations. Schools authorized to participate in the program, but which are not immediately offering IB courses, pay a fee of \$2,000 to remain affiliated with the program (IBO, 1997b).

ACCESS TO TESTING

Overview. On both a state and national level, efforts are designed to facilitate access to testing and help to ensure increasing participation rates. Texas State Board of Education rules (19 TAC §§74.11-74.13, 1998), for example, allow AP and IB courses to satisfy high school graduation requirements. In addition, state and federal funding provide support for financially needy students interested in taking AP and IB examinations.

The College Board strives to enhance test access to both students and teachers. Flexibility in administration accommodations is offered for students with disabilities or students experiencing extreme hardship. Also, professional development opportunities are provided to teachers interested in teaching advanced courses. The IBO provides similar resources for training and support.

At the local level, high schools can have a significant impact on the number and diversity of students participating in AP and IB courses and examinations. More students are likely to participate in AP and IB courses and examinations when *all* students are encouraged to undertake such course work and when the opportunities for such course-taking are provided in the curriculum. Teachers tend to participate more as they are provided professional development opportunities on the teaching of advanced subject areas. Schools, teachers, and students are more likely to participate in these programs as financial assistance is provided to support training, curriculum changes, and examination taking.

Texas AP/IB Incentive Program. The formal purpose of the Texas AP/IB Incentive Program (TEC §§28.051-28.058, 1997) is to recognize and reward demonstrated success in achieving the state's educational goals. Table A-4 on page 32 in Appendix A presents the incentives aimed at schools, teachers, and students and whether or not each incentive was funded in the 1998-99 biennium.

Until the start of the current biennium, the AP/IB Incentive Program had been severely constrained. The Texas Legislature approved a total of \$3.0 million for the fiscal 1998-99 biennium: \$500,000 per year from

the Foundation School Program and \$2.0 million from the biennium allocation for Gifted and Talented students. These funds were used to reimburse AP teachers who attended AP summer institutes, and to provide fee reductions for students with financial need. Effective in the fiscal 2000-01 biennium, the state legislative appropriation was substantially increased to a total of \$21.0 million for the biennium. This includes \$2.0 million from the biennium allocation for Gifted and Talented education for *both* Pre-AP/IB activities (for middle school and early high school students) and the Texas AP/IB Incentive Program over the biennium. A remaining \$8.0 million and \$11.0 million were allocated for the Texas AP/IB Incentive Program for FY 2000 and FY 2001, respectively (Rider 30 of the General Appropriations Act, Article III—Education, 76th Legislature). Thus, additional components of the AP/IB Incentive program to be funded in 1999-2000 include: (a) \$30 of the cost of every AP or IB examination taken by high school students completing a PEIMS-designated AP or IB course, (b) financial bonuses to campuses for each student scoring 3-5 on an AP examination or 4-7 on an IB examination, and (c) equipment grants of up to \$3,000 (based on need) to up to 150 campuses submitting applications (TEA, 1999a).

Federal AP fee assistance program. The federal AP fee assistance program was first authorized in the 1992 Higher Education Act; however, the program was not actually funded by Congress until federal fiscal year (FY) 1998, when a total of \$3 million was awarded (CEEBS, 1997f). This program was first implemented in 32 states, including Texas, to provide fee assistance for low-income students. Those students who qualified as “low-income” were at 150 percent of the Census Bureau’s poverty guidelines. Consequently, \$300,000, Texas’ share of the \$3 million in federal grants, was available to financially needy 1999 Texas examinees. The Secretary of Education expanded the fee assistance program to financially needy students taking IB examinations as well. The federal money resulted in about \$15 extra in fee reductions per examination for financially needy Texas examinees. In addition, Congress recently appropriated \$4 million for federal FY 1999 AP fee assistance. Of the \$4 million, Texas again will receive \$300,000 for May 2000 examinations. In addition, Texas has the opportunity to compete for another \$300,000 to develop programs that increase participation of low-income students in AP and IB programs.

Block scheduling and AP. Many high schools in Texas are using a variety of methods to schedule classes known collectively as block scheduling. One of the most common forms is four courses meeting 80 to 90 minutes a day for about ninety days (Kramer, 1996). With this type of schedule, students may be exposed to advanced material only one semester out of the year. If the advanced course ends in December, with AP and IB examinations administered in May, there is a concern that the students may not perform as well as if they had more recently finished the course. When courses are compressed into the spring semester, students may not have finished the course work by the time examinations are administered in May. Some educators maintain, however, that students actually can fit more advanced courses into their schedules under a block schedule arrangement than under traditional schedules (Edwards, 1995):

In a recent College Board study of the four most popular AP examinations (Calculus AB, Biology, U.S. History, and English Literature), students on year-long schedules generally performed better on the four AP examinations than students on semester-long course schedules (CEEBS, Office of Research and Development, 1998). Moreover, when students were on compressed schedules, results suggested they achieved higher AP scores when instruction was more recent (e.g., spring course followed by May examination) and when more time was scheduled for instruction. Results for the English Literature and U.S. History examinations tended to be less compelling than those for the Calculus AB and Biology examinations. One possible explanation may involve the way these courses are taught, with better or multiple opportunities for schooling (including self-study) in English and history throughout Grades K-12.

Results from studies of the impact of block scheduling on AP examination scores should continue to be carefully considered, along with educational, course-specific, and other (e.g., discipline or cost-related)

factors that may also play into the various local scheduling scenarios. For example, results were inconclusive from a multivariate study conducted by TEA (1999b) of the impact of block scheduling on a number of performance indicators in Texas public high schools. The College Board's AP Program (1996) suggested that "performance gaps may narrow or disappear as teachers gain more experience with the use of the 90-minute period of instruction" (p. 3).

SPECIFIC USES OF AP AND IB EXAMINATION RESULTS

State and national reporting on overall progress. For many years, the College Board has prepared summary reports of AP examination results for the nation and the individual states (e.g., CEEB & ETS, 1995, 1996, 1997b). The national results have provided an implicit benchmark for examining state performance. However, the state versus national AP performance comparisons are most appropriate when AP examination participation rates, educational and demographic characteristics of examinees, and AP policies within states and within secondary and postsecondary institutions are similar. Such comparisons, when made with consideration of other potential explanations for performance differences, can help in evaluating educational progress within and among institutions over time.

In recent years, interest in using AP examination results as indicators of educational progress and comparative performance has emerged nationally, as well as within certain regions of the nation. One example is the National Education Goals Panel's (NEGP, 1994a, 1994b) annual progress reporting of AP examination participation and performance. It was chosen as a direct measure of Goal 3, one of the eight National Education Goals adopted by Congress in 1994. Goal 3 calls for the nation's students to demonstrate competency over challenging subject matter in a broad array of academic subjects by the year 2000. The AP measure in the NEGP reports is the number of AP examination scores of grade 3 or higher per 1,000 11th- and 12th-graders. These reports compare the most recent year's performance to a prior benchmark year to gauge progress on the measure for the nation and for individual states. In Texas, significant improvement was observed, with the number of scores 3-5 more than doubling from 1991 to 1997 (34 per 1,000 students, 1991; 78 per 1,000 students, 1997). The national number of scores 3-5 also increased over this period from 55 per 1,000 students to 85 per 1,000 students (NEGP, 1997).

State policy regarding the Academic Excellence Indicator System (AEIS). The Academic Excellence Indicator System (AEIS) and the accountability system support the accomplishment of the state's goals for public education. These systems recognize, reward, sanction, and intervene with school districts and campuses to ensure excellence in education for all segments of the student population. Information used to rate and acknowledge districts and schools, or to provide a more comprehensive profile of characteristics and performance, is compiled into the AEIS reports. Three types of performance and profile indicators are used in the system.

- **Base indicators** are identified in statute and used to determine accountability ratings.
- **Additional indicators** are used to acknowledge high performance on other statutorily defined indicators.
- **Report-only indicators** are furnished on annual campus-, district-, and state-level reports. They may be identified by statute, identified by the commissioner, or adopted by the State Board of Education (TEA, 1997b).

In April 1996, the State Board of Education adopted AP performance and participation data as a report-only indicator for the AEIS. The reporting of this indicator began in 1996 with inclusion of examination results for that year and the previous year. At the time, it was requested that IB performance and participation data be included as part of the AEIS as soon as possible, but at least within the next two years (State Board of Education, 1996). Effective in the fall of 1998, this indicator was defined and reported as the unduplicated, or

combined, AP and IB participation (one measure) and performance (two measures) for both examinations and examinees at the district, region, and state levels (cf. TEA, 1998b). Except for the few districts with both AP and IB participation (10 statewide in 1996-97), the indicator actually represents *AP participation and performance only*.

DATA SOURCES

Data were compiled and analyzed from a number of sources for this report. Consistent with the compilation and reporting of AP and IB examination data from these sources, results are summarized by the year within which the May examinations are taken.

First, College Board summary reports of AP score results for all examinees (from both public and non-public schools) from 1986-87 through 1996-97 were used as the source for comparisons among Texas, the nation, and other states (CEEB & ETS, 1987, 1988, 1989, 1990, 1991, 1992, 1993, 1994b, 1995, 1996, 1997b). No comparable reports (cf. IBO, 1995) were available from the IBO for summaries of all (both public and non-public school) IB score results for Texas, others states, the nation, other nations, or internationally. Second, score results for Texas public school students were provided directly to TEA by the College Board (via Educational Testing Service [ETS] on contract for the College Board) and by the IBO in Cardiff, Wales, Great Britain. *Note that Texas public school results were the only IB score data available and comparable to AP for inclusion in this report.* Third, the Texas public school AP and IB examination score results were examined in conjunction with data taken from TEA's Public Education Information Management System (PEIMS) database. These second and third data sources are also the sources used for AP and IB data reported in the Academic Excellence Indicator System (AEIS).

Student grade level, ethnicity, and gender, as well as other district, campus, and student coursework completion information from PEIMS, were used to analyze the Texas public school AP and IB results. When student grade level, ethnicity, and gender were not available from PEIMS, they were obtained from the Texas AP examinee files. In a very few instances, when these same student data were unavailable from PEIMS for IB examinees, they remained unavailable because they could not be obtained from the Texas IB examinee files.

CURRENT RESULTS AND TRENDS

GENERAL TRENDS

AP examination trends for Texas, the nation, and other states. In May 1997, 37,563 students in 834 Texas schools (public and non-public) took 62,318 Advanced Placement (AP) examinations (see Table A-2 on page 30 in Appendix A). This put Texas *third* in the nation, behind California and New York, in the number of AP examinees and examinations. Texas was *fourth* among the states in the percentage change (+18.0%) in number of examinees from the previous year—especially impressive because each of the other states posting a greater percentage of growth had fewer than 2,500 examinees versus Texas' 37,000+ examinees.

Table 1 on page 8 shows that, from 1987 to 1997, the number of Texas AP examinees more than *quadrupled* from 8,792 to 37,563, while national numbers went from 259,222 to 566,720. At the same time, the number of AP examinations taken in Texas rose *almost fivefold* (from 12,506 to 62,318), while the number of examinations taken nationally more than doubled (from 364,804 to 899,463). The number of Texas schools (public

TABLE 1

AP Examination Trends for Texas and the Nation: 1986-87 through 1996-97

Year	Number of AP Schools		Number of Examinees		Number of Exams		Number of Scores 3-5		Percent of Scores 3-5	
	Texas	U.S.	Texas	U.S.	Texas	U.S.	Texas	U.S.	Texas	U.S.
1997	834	11,424	37,563	566,720	62,318	899,463	37,526	579,865	60.2	64.5
1996	756	11,136	31,843	525,072	52,156	824,329	32,381	523,321	62.1	63.5
1995	649	11,274	27,770	493,263	45,733	767,881	28,006	476,327	61.2	62.0
1994	544	10,863	21,178	447,972	33,944	684,449	23,605	452,377	69.5	66.1
1993	502	10,594	18,139	413,939	28,437	623,933	19,334	401,256	68.0	64.3
1992	451	10,191	15,364	378,692	23,672	566,036	16,442	369,942	69.5	65.4
1991	413	9,781	14,101	351,144	21,529	523,236	14,446	334,911	67.1	64.0
1990	394	9,292	12,766	323,736	19,625	480,696	13,367	318,963	68.1	66.4
1989	346	8,768	11,832	309,751	17,813	455,996	12,102	297,813	67.9	65.3
1988	297	8,247	10,478	288,372	15,567	419,101	10,739	281,566	69.0	67.2
1987	285	7,776	8,792	259,222	12,506	364,804	8,897	246,458	71.1	67.6

Data Sources: CEEB and ETS (1987-1993, 1994b, 1995-1996, 1997b) and personal communication with P. Williamson, College Board Southwestern Regional Office, November 10, 1997, for number of schools data for 1987-1990. Examination score data are for all schools (public and non-public).

The percentage of Texas schools with AP examinees in 1996-97 was 56.3 percent compared to 52.9 percent nationwide.

and non-public) participating in AP examinations also rose during the period, *nearly tripling* from 285 to 834, while the same increase nationally was almost 50 percent (from 7,776 to 11,424). In 1997, the percentage of Texas schools participating in AP examinations (56.3%) exceeded the national percentage (52.9%), while New Jersey was the highest (85.0%) and North Dakota was the lowest (7.4%) (see Table A-2 on page 30 in Appendix A).

From 1987 to 1997, patterns of the most marked increases in Texas AP examinee and examination volumes and number of participating schools coincided in 1994-95, while corresponding growth nationally was relatively steady (see Table 1). In some part, this can be linked to 1993 Texas legislation first authorizing and partially funding the Texas Advanced Placement Incentive Program in 1994-95, which has been continued through the current biennium, spanning 1999-2000 through 2000-01.

Along with increasing numbers of examinations, Texas has experienced a dramatic increase in the number of 3-5 AP scores over the past 11 years (from 8,897 to 37,526), as shown in Table 1. Since 1994-95, however, the percentage of AP examination scores of 3-5 earned by Texas students (60.2% in 1996-97) has slipped below the national percentage (64.5%). Considering the large increases in the total number of examinees and examinations, most notably in Texas since 1994-95, the decline in overall AP examination scores is not surprising—because the decline coincides with an increase in schools participating in the AP program *for the first time*.

Table A-2 on page 30 in Appendix A shows that there was a moderately positive correlation between 1996-97 state percentages of 11th- and 12th-graders taking AP examinations, and the percentages of examinations with scores of 3-5. That is, the two percentages tended to increase or decrease together. Because the percentages of all (public and non-public school) students taking AP examinations in most states remains quite low, this suggests that there is still a great deal of untapped potential in student participation and performance among states.

Statewide AP and IB participation and performance trends for public schools. Texas public school AEIS indicator trends statewide on AP mirrored trends mentioned earlier for all Texas schools. From 1995 to 1997, the percentage of 11th- and 12th-graders taking AP examinations rose from 6.8 percent to 8.5 percent (see Table 2). While both the percentage of examinees and of examinations with 3-5 scores slipped from 1996 to 1997 (from 62.6% to 61.7% for examinees, and from 60.6% to 58.7% for examinations), **both a greater number of examinees and a greater number of examinations** than ever before qualified potentially for advanced standing or college course credit (see Tables 3-4 on page 10).

As with the AP program, public school IB participation also has increased over time, though on a much smaller scale. There were 619 Grade 11-12 students in 12 Texas public schools who took 1,481 IB examinations in 1997—up from the 429 students in 11 schools taking 910 IB examinations in 1995 (see Table 5 on page 12). Thus, most of the growth in IB examination participation has occurred *within* rather than across schools. In contrast to the AP performance dip most recently, the percentage of Texas public school IB examinees earning scores of 4-7 went from 79.7 percent in 1995-96 to 85.9 percent in 1996-97, while the percentage of examinations with these same scores rose from 73.4 percent to 76.0 percent (see Tables 6-7 on page 13).

Statewide AP and other advanced course taking trends and examination taking correspondences. Fundamental to preparation for success on both AP and IB examinations is relevant coursework, such as AP, IB, or other types of advanced courses. Paragraphs below summarize to what extent students in Texas public schools appear to be completing such coursework, according to data collected through PEIMS. Even assuming that some inaccuracies may exist in reporting the courses completed by individual high school students, the trends by and large fairly consistently and compellingly suggest steadily increasing numbers of students completing the relevant AP and other TEA-approved advanced courses each year.

TABLE 2

Texas AP Examination Participation: 1994-95 through 1996-97 Public Schools, Grades 11-12

Data Sources: TEA analysis of CEEB 1994-95 through 1996-97 Texas AP public school examination data using grade level, gender, and ethnicity from TEA PEIMS as available and from AP files otherwise.

The College Board encourages schools with AP examinees to offer AP courses in corresponding subject areas. However, circumstances such as resource constraints or too few students may mitigate against AP courses being offered at some high schools. On the other hand, non-AP advanced courses may prepare students sufficiently to perform well on the AP examinations. As Figure 1 shows, Texas public schools with students *completing AP courses* rose from 158 schools in 1993 to 632 schools (or 41.5% of schools with 11th- and 12th-graders) in 1997. While the number of schools with students taking AP examinations but *not completing AP courses* decreased from 288 to 179 over the same period, the number of schools with students *completing both AP courses and examinations* grew from 135 to 557 (36.6% of schools). In addition, the number of schools with students *completing AP courses without taking AP examinations* went from 23 to 75, perhaps representing the recent rapid increase in the number of schools offering AP courses for the first time.

Native American	119	74	62.2	116	73	62.9	98	58	59.2
White	27,289	16,788	61.5	30,576	19,374	63.4	36,024	22,331	62.0

Data Sources: TEA analysis of CEEB 1994-95 through 1996-97 Texas AP public school examination data using grade level, gender, and ethnicity from TEA PEIMS as available and from AP files otherwise.

The five-year period from 1993 to 1997 also saw student participation in AP and other advanced courses increase (see Table A-5 on page 33 in Appendix A). The number of Texas public school Grade 9-12 students completing at least one AP course more than quintupled from 11,402 to 59,939, while the number of AP courses completed went from 17,073 to 170,503—almost a 10-fold increase. In 1996-97, 19.6 percent of Texas public school Grade 9-12 students completed and received credit for TEA-defined advanced courses (AP, IB, and other), also up from earlier years (TEA, 1998a).

FIGURE 1

**Number of Texas Public Schools with Grade 9-12 AP Courses and Examinations
1992-93 to 1996-97**

Data Sources: TEA analysis of CEEB 1992-93 through 1996-97 Texas public school AP examination data and analysis of 1992-93 through 1996-97 TEA PEIMS course completion data, using only last semester completion of courses as the basis for numerical counts.

Note. 1994-95 counts for the number of schools with AP examinations and the number of schools with AP courses vary slightly from counts reported for these data in TEA (1995), which were preliminary at that time. Counts for schools with "exams but no courses" and with "both exams and courses" sum to slightly less than the total number of schools with "AP exams" because of slight differences in the public schools appearing in both the AP examination and PEIMS course completion data files in 1992-93 and 1993-94.

Since 1992-93, the number of Texas public schools with AP examinees has increased substantially, as well as the number of schools with students completing AP courses. In 1996-97, 75 schools had students completing AP courses without taking the examinations, while the number of schools with AP examinees and no AP courses decreased by more than 100 from 1992-93 to 1996-97.

Not all of the students who participate in advanced courses ultimately take AP examinations, nor do all AP examinees take AP courses. These correspondences were examined for school years 1992-93 through 1996-97. Beginning in 1995 for the first time, over half (rather than under half) of the public school Grade 9-12 AP examinees (56.4%) also completed at least one AP course; this rose to 70.5 percent in 1997 (see Table A-6 on page 33 in Appendix A). In addition, 9 out of 10 (90.8%) 1997 AP examinees completed some type of TEA-defined advanced course that same year.

Table A-7 on page 34 in Appendix A shows that, while less than one-fifth (17.8%) of public school Grade 9-12 students completing any TEA-defined advanced course also took an AP examination in 1997 (up from 12.2% in 1993), over 40 percent of AP course completers took an AP examination (up slightly since 1993). Specifically, more than half (57.0%) of 1997 AP examinations were taken by students completing the corresponding AP subject course (an increase from 27.2% in 1993), and more than one-third (34.3%) of AP course completers in 1997 took corresponding AP subject examinations (a slight decrease since 1993) (see Table A-8 on page 34 in Appendix A). On average, AP examinees completing the corresponding AP courses in the same year continued outscoring examinees not completing the corresponding courses, as shown in Table 8 on page 14.

Subject-specific AP and IB examination participation and performance patterns. A richer understanding of AP and IB examination participation and performance can be obtained by studying examination data by subject. Table A-9 on page 35 in Appendix A shows the AP English Language and Composition, English Literature and Composition, and U.S. History examinations combined accounted for almost half (48.2%) of all 1997 AP examinations taken by Texas (public and non-public school) students, followed by Calculus AB and Spanish Language. Nationally, the AP English Literature and Composition, U.S. History, Calculus AB, and Biology examinations accounted for about half (53.6%) of 1997 examinations taken.

Texas students took relatively fewer AP examinations than students nationally in Biology, Chemistry, Physics B, and European History. When at least 500 AP examinations were taken in a subject, Texas mean scores exceeded national scores the most on Studio Art: General, Spanish Language, and Calculus BC examinations.

TABLE 5

Texas IB Examination Participation: 1994-95 through 1996-97 Public Schools, Grades 11-12

Student Groups	1994-95			1995-96			1996-97		
	Number of Students	Number of Examinees	Percent of Students Taking Exams	Number of Students	Number of Examinees	Percent of Students Taking Exams	Number of Students	Number of Examinees	Percent of Students Taking Exams
All	352,587	429	0.12	359,336	419	0.12	377,285	619	0.16
Female	182,228	242	0.13	186,647	233	0.12	195,693	358	0.18
Male	170,359	181	0.11	172,689	183	0.11	181,592	257	0.14
African American	43,811	38	0.09	45,849	33	0.07	49,021	61	0.12
Asian American	11,189	60	0.54	11,553	53	0.46	12,118	112	0.92
Hispanic	107,843	27	0.03	110,328	24	0.02	117,575	31	0.03
Native American	792	< 5	-	821	< 5	-	831	< 5	-
White	188,952	298	0.16	190,785	306	0.16	197,740	410	0.21

Data Sources: TEA PEIMS for student enrollment. TEA summary analyses of Texas public school examination data files provided in 1997 by the IBO in Cardiff, Wales, Great Britain. Grade level, gender, and ethnic group from TEA PEIMS as available. Thus, the sums of examinees by gender and by ethnic group are slightly less than the total for all examinees. Statistics based on fewer than five examinees are masked (-).

The most popular IB subject examination in 1996-97 was English A1, accounting for just over one-fifth (21.1%) of Texas public school examinations, followed by Spanish B, Economics, and History: Americas HL (see Table A-10 on page 36 in Appendix A). Of these four, mean scores were highest on Spanish B and History: Americas HL.

DIFFERENTIATING TRENDS AND PATTERNS

Examinee profiles by ethnicity. Texas Hispanics, African Americans, and Native Americans remained underrepresented as groups among 1997 AP and IB examinees. However, both Texas African Americans, at 4.4 percent, and Hispanics, at 20.4 percent, increased as percentages of all (public and non-public school) AP examinees from 1996 (see Table 9 on page 15). Among Texas public school IB examinees in 1997, Whites represented the largest percentage of test takers, at 66.2 percent, followed by Asian Americans (18.1%), African Americans (9.9%), Hispanics (5.0%), and Native Americans (less than 1.0%).

Hispanic	48	30	62.5	46	29	63.0	65	46	70.8
Native American	—	—	—	—	—	—	—	—	—
White	634	489	77.1	635	475	74.8	937	782	83.5

Data Sources: TEA summary analyses of Texas public school examination data files provided in 1997 by the IBO in Cardiff, Wales, Great Britain. Grade level, gender, and ethnic group from TEA PEIMS as available. Thus, the sums of examinees by gender and by ethnic group are slightly less than the total for all examinees. Statistics based on fewer than five examinees are masked (—).

Compared to the nation, Texas had more than twice the percentage of 1997 (public and non-public school) AP examinees who were Hispanic (20.4% versus 8.4%), but a lower percentage who were White (58.0% versus 65.6%) and Asian American (9.3% versus 11.2%). Higher proportions of historically lower-scoring, under-prepared groups of examinees in Texas may help explain Texas' lower percentages of 3-5 AP examination scores overall versus the nation.

Ethnic group participation and performance trends. Although the participation rate for Texas public school Hispanics and African Americans has been climbing steadily over the past three years, only 5.2 percent of Hispanics and 3.2 percent of African Americans took a 1997 AP examination, versus 10.7 percent of Whites and about one-quarter (25.3%) of Asian Americans (see Table 2 on page 9). Growth in participation rates also has been less rapid for Hispanics and African Americans than for Asian Americans and Whites, while the rate for Native Americans has fallen. Even with a 4:1 ratio of African American to Asian American students, almost twice as many Asian American as African American students took a 1997 AP examination. Likewise, Hispanic students outnumber Asian American students by almost 10 to 1, but there were just over twice as many Hispanic as Asian American AP examinees.

TABLE 8

**Correspondence between AP Examination Scores and AP Courses Completed:
1992-93 to 1996-97 Texas Public Schools, Grades 9-12**

AP Exam Score	1992-93 Exams Taken With and Without the Corresponding AP Course		1993-94 Exams Taken With and Without the Corresponding AP Course		1994-95 Exams Taken With and Without the Corresponding AP Course		1995-96 Exams Taken With and Without the Corresponding AP Course		1996-97 Exams Taken With and Without the Corresponding AP Course

Mean Score	3.02	3.24	3.08	3.21	2.82	2.99	2.82	2.98	2.80	2.92

Data Sources: TEA analysis of CEEB 1992-93 to 1996-97 Texas AP public school examination and TEA PEIMS course completion data, using only last semester completion of courses as the basis for numerical counts.

Note. AP examinations were linked to corresponding AP courses by student to obtain the statistics above. In a small number of instances, scores were not available for examinations that were taken and, thus, are not included in the statistics above.

Similar to AP participation, Texas public school Asian Americans had the highest IB examination participation rate in 1996-97 on a percentage basis (almost 1.0%) among all ethnic groups (see Table 5 on page 12). Asian American examinees (112) also continued to exceed *in number* African American (61) and Hispanic (31) IB examinees. Clearly, issues of ethnic minority group access to AP and IB examinations call for continued attention in the state's, as well the nation's, schools.

Compared to 1995 results, the percentages of Texas public school Grade 11-12 AP examinees scoring 3-5 dipped slightly in 1997 for all ethnic minority groups (see Table 3 on page 10), as did the 3-5 examination score percentages (see Table 4 on page 10). Otherwise, these same percentages for Whites rose slightly. Among examinees over the past three years, nearly three-fourths of Asian American examinees received 3-5 scores, followed by about two-thirds of Native Americans, nearly two-thirds of Whites, over half of Hispanics, and around one-third of African Americans. Slightly lower but roughly the same pattern of 3-5 AP examination score percentages also were achieved by all ethnic groups.

In contrast to AP results, Texas public school IB examinee percentages with 4-7 scores increased for all groups from 1995 to 1997 (see Table 6 on page 13), while percentages of 4-7 IB examination scores rose for all groups except African Americans (see Table 7 on page 13). Asian Americans (at 96.4% in 1997) as a group had the highest percentage of examinees scoring 4-7, followed by Whites (91.2%), Hispanics (77.4%), and African Americans (34.4%).

TABLE 9

1996-97 AP Examinees by Grade Level, Gender, and Ethnicity for Texas and the Nation

Examinee Group	Number of Examinees		Percent of Examinee Group		Difference in Percent of Examinee Group from 1995-96 to 1996-97	
	Texas	U.S.	Texas	U.S.	Texas	U.S.
9th/10th grade	1,975	42,615	5.3	7.5	0.9	0.3
11th grade	16,883	216,250	44.9	38.2	2.5	0.6
12th grade	18,249	301,047	48.6	53.1	-2.7	-0.4
11th/12th grade	35,132	517,297	93.5	91.3	-0.2	0.3
Female	21,488	313,451	57.2	55.3	0.5	0.2
Male	16,075	253,269	42.8	44.7	-0.5	-0.2
African American	1,657	24,469	4.4	4.3	0.5	0.0
Native American	145	2,520	0.4	0.4	-0.1	-0.1
Asian American	3,494	63,528	9.3	11.2	-0.3	0.0
Hispanic	7,665	47,626	20.4	8.4	1.8	0.3
White	21,781	371,606	58.0	65.6	-1.1	-0.1
Other Ethnicity	801	15,903	2.1	2.8	0.4	0.3
Not Stated	2,020	41,068	5.4	7.2	-1.1	-0.5
Total	37,563	566,720	100.0	100.0		

Data Source: CEEB and ETS (1996, 1997b). Data are based on all (both public and non-public school) examinees.

Note. Statistics for examinees who were not in Grades 9-12 are excluded from the grade level groups above.

Examinee profiles by gender. Table 9 on page 15 shows that females continued to increase as a percentage of all AP examinees nationally (55.3% in 1997) and in Texas (57.2% in 1997). Similarly, females made up the largest share (57.8%) of 1997 Texas public school IB examinees. The growing underrepresentation of males among examinees raises questions about the reasons for this trend.

Female and male participation and performance trends. Over the past three years, as shown in Table 2 on page 9, the percentage of Texas public school female Grade 11-12 students taking AP examinations increased more rapidly (from 7.5% in 1995 to 9.4% in 1997) than the percentage of males (from 6.1% in 1995 to 7.5% in 1997). During the same period, the percentage of female examinees with 3-5 scores remained relatively steady (60.5% in 1995 and 1997), while the percentage for male examinees declined from 64.9 percent to 63.3 percent (see Table 3 on page 10). Females exceeded males in the sheer **number** of examinees earning 3-5 AP scores due, in part, to the higher number of female examinees.

As with AP participation, a greater number of Texas public school females (358) than males (257) took 1997 IB examinations, and the participation gap between the two grew larger since 1995 (see Table 5 on page 12). While a higher percentage of female IB examinees than males achieved 4-7 scores in 1995 only, Table 6 on page 13 also shows that a higher **number** of females than males achieved 4-7 scores from 1995 to 1997.

AP and IB examination results by district. Of the 980 Texas public school districts with Grade 11-12 enrollment in 1996-97, 523 had students who took at least one AP examination, and 9 of the 523 also had students who took one or more IB examinations. All 9 districts with IB examination participation also had AP examination participation. Of the 980 districts with eleventh and twelfth graders, 457 had neither AP nor IB participation. Of the 412 districts with five or more AP examinees, 110 districts had fewer than five examinees or examinations with scores of 3, 4, or 5. Table B-1 on page 41 in Appendix B lists the 1997 Texas AP examination results for each district with eleventh and twelfth graders. Table B-2 on page 55 lists the 1997 IB results for only the nine districts with examinees.

Characteristics of districts participating in AP and IB examinations. The majority of public school districts with enrollments of 1,000 students or more were participating in 1997 AP examinations; **all** districts with enrollments of 10,000 or more were participating (see Table C-1 on page 61 in Appendix C). (See the Glossary on page 71 for definitions of each of the 25 distinct groupings of districts shown in Appendix C tables.) However, 78.4 percent of rural districts were not participating. A majority of districts in 10 of 20 education service center (ESC) regions (Regions 1-5, 10-11, 13, 19-20) had AP participation. Also, only a minority of districts had AP examination participation when: there was less than 55.0 percent of SAT I- or ACT-tested graduates; no student's score exceeded 1110 for the SAT I Total or 24 for the ACT Composite; average teacher salaries were below \$29,392; the percentage of ethnic minority teachers was below 5.0 percent; and the percentage of teachers with advanced degrees was less than 13.8 percent.

The nine public school districts with IB participation had most characteristics in common with the types of districts with majority AP participation (see Table C-2 on page 65 in Appendix C). All nine had enrollments of 5,000 students or more, at least 20.0 percent of examinees scoring at least 1110 on the SAT I or 24 on the ACT, and ethnic minority pupil enrollments of at least 20.0 percent. Only two of the districts had average teacher salaries of less than \$32,078, and only one had under 55.0 percent of SAT I- or ACT-tested graduates or under 27.9 percent of teachers with advanced degrees.

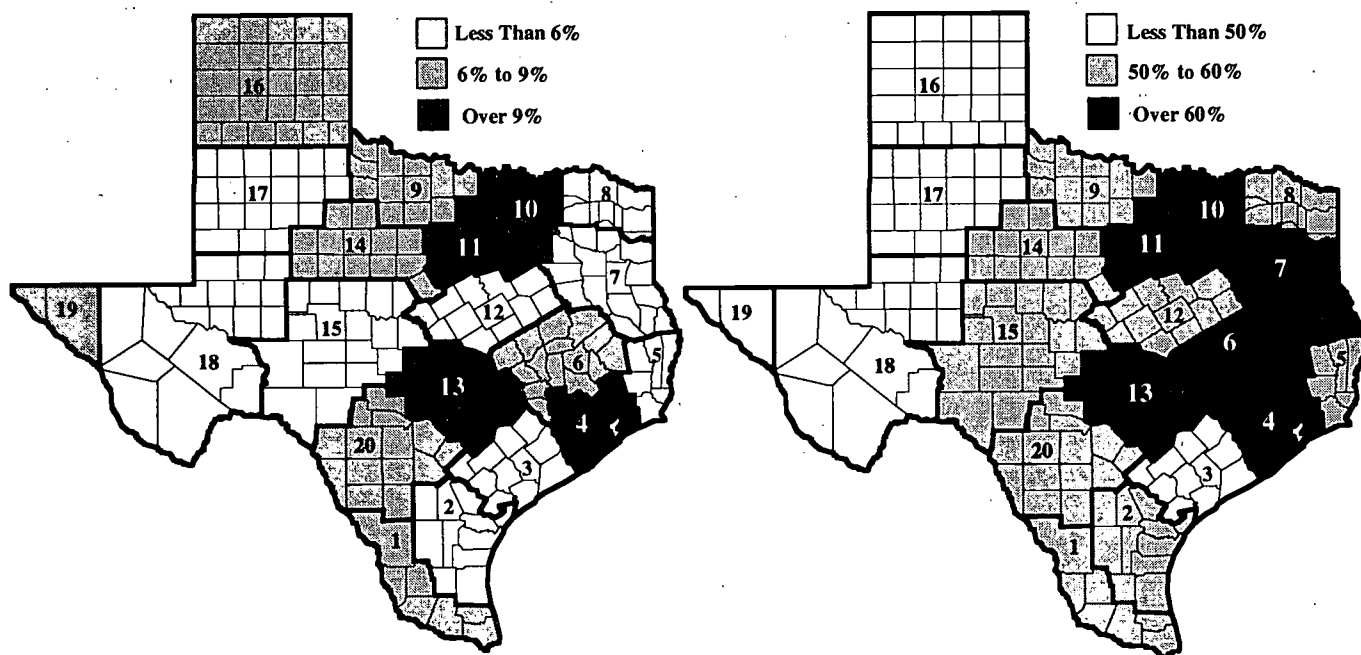

Characteristics associated with district-wide AP examination participation and performance. Of Texas' 523 public school districts with 1997 AP examination participation, those with the highest participation (above 9.0% of students tested) tended to be in four major urban/suburban ESC regions of the state: Austin, Fort Worth, Houston, and Richardson (see Figure 2, and Table C-3 on page 67 in Appendix C). These four ESC regions plus the Huntsville and Kilgore regions tended to have at least 60.0 percent of examinees scoring 3-5 on at least one AP examination. In addition, district AP participation and examinee performance generally tended to increase along with increases in district characteristics such as average teacher salaries, percentages of students passing all TAAS tests taken, percentages of graduates taking the SAT I or ACT, and percentages of examinees with SAT I Total scores of at least 1110 or ACT Composite scores of at least 24 (see Figure 3 on page 18, and Table C-3 on page 67 in Appendix C).

It is important to recognize that the higher AP participation and performance in districts with higher average teacher salaries may be linked in part to other district characteristics, such as district size, that are also related to teacher salaries. For example, large districts, which have higher AP participation and performance, also typically have higher teacher salaries.

FIGURE 2

1996-97 AP Participation: Percent of Students Taking at Least One Examination

1996-97 AP Performance: Percent of Examinees Scoring 3 or Above

Data Sources: TEA analysis of CEEB 1996-97 Texas public school AP examination data and TEA PEIMS 1996-97 enrollment data using examinee grade level from PEIMS as available and from AP files otherwise.

FIGURE 3
1996-97 AP Participation and Performance by
District Characteristics

Data Sources: TEA analysis of CEEB 1996-97 Texas public school AP examination data and of TEA PEIMS 1996-97 enrollment data using examinee grade level from PEIMS as available and from AP files otherwise.

SUMMARY

Overall, the AP results show robust growth over the past eleven years (1987-1997) in the number of Texas schools and districts with students participating in the examinations, number of students tested, number of examinations taken, and number of advanced courses (AP, IB, and other TEA advanced courses) completed by public school students. AP examination performance results are more mixed, with the highest number yet (through 1997) of examinees earning scores of 3-5 on the examinations, but with a small slippage in the percentage of examinees earning the same range of scores. As educators and students in schools with new or recently expanding AP programs gain more experience with AP courses and examinations, recovery in examination performance is expected.

While the number of participating IB public schools and districts remained virtually constant from 1995 to 1997, the 1996-97 examinee and examination numbers did represent respective increases of about 50 percent and 70 percent above those same numbers in the prior year. Similarly, the number of 4-7 Texas IB scores showed about a 77 percent increase in 1996-97 over the previous year's number, and the percentage of scores at 4-7 (76.0%) was highest in 1996-97.

CONSIDERATIONS FOR EDUCATIONAL COMMUNITIES

Benefits of the AP program extend not just to students, but also to their teachers, high schools, and the colleges and universities they attend (CEEB, 1996b). Although only a few schools in Texas have IB programs, similar benefits most likely apply. Potentially, both programs provide students with the opportunity to study certain academic subjects in greater depth and to develop analytical and other study skills that can contribute to college-level success. The examinations can also enrich the academic experience because comparisons of achievement with peers can motivate and inspire confidence for managing academic challenges in college. Most obviously, students with sufficiently high examination scores can receive college credit or advanced placement, depending on the policies of the college or university they attend.

For secondary school teachers, both programs introduce opportunities for professional development and the chance to teach challenging subjects to able, motivated students. For secondary schools, both programs can help enrich the academic curriculum and enhance the quality and reputation of college preparatory programs. For colleges and universities, both programs can provide additional means to identify and recruit students who have successfully met demands in challenging college-level courses.

To reap the most in potential benefits from AP and IB courses and examinations, educational communities (students, educators, policy makers, schools, and community members) should examine a number of educationally relevant factors and supports. Such considerations can help ensure that able, motivated students have access to AP or IB courses and examinations and that students will be successful.

STUDENT ACCESS TO AP AND IB COURSES AND EXAMINATIONS *WITHIN SCHOOLS* SHOULD BE EXAMINED.

Access to courses. The challenge is to develop programs that will effectively prepare a broad range of high school students for exposure to college-level academics offered in high school. To that end, curriculum articulation and alignment may need scrutiny, including possible development of Pre-AP, Pre-IB, or other relevant prerequisite courses to better prepare a large number and diversity (e.g., by ethnicity, gender, economic status, etc.) of students for AP and IB courses. Forming AP vertical teams of educators across grades (middle and high school) and content areas may help in this regard, as well as review of district and school policies governing access to AP and IB courses. Educators must ensure that the opportunity for participation in such courses is open to all students.

Access to examinations. As is the case for any examination not required of all students (e.g., SAT I, ACT, AP, IB, etc.), the extent of student participation can be affected by any number of factors.

- One important factor is the fee charged per AP or IB examination taken. Although paying fees for examinations that provide students the potential to earn college credit with qualifying scores is much less than the cost of taking college courses, the fees can be prohibitive for many. However, examination cost has become less of an issue with: College Board fee reductions for AP examinations; the funding of the Texas AP/IB Incentive Program over the three previous biennia and especially the current biennium; the new federal funding for AP and IB; and other locally sponsored fee reductions and waivers (e.g., Hager, Antinone, Fleisher, & Vinson, 1997). These efforts usually include special provisions for assisting financially needy students.

- While students may take AP and IB examinations for reasons other than for earning college course credit or advanced placement, qualifying scores on other examinations, such as the College Board's SAT II: Subject Tests and CLEP tests, are often used by colleges and universities as alternative tests to grant students course credit or advanced placement (e.g., Brasel, 1993; TEA, 1997a; The University of Texas at Austin, 1995).
- Even students who receive high school credit for AP or IB courses without taking the examinations or without achieving qualifying examination scores often receive more consideration in the college admissions process than students who have not completed advanced high school courses.

STUDENT ACCESS TO AP AND IB COURSES AND EXAMINATIONS *STATEWIDE* SHOULD BE EXAMINED.

While the number of Texas schools and districts with AP courses, examinations, or both has been growing quite rapidly over the past few years, there remain a large number of Texas public high schools and districts with students taking neither the courses nor examinations. Texas public school data in 1997 continued showing low-enrollment districts having lower AP examination participation than large districts. Because of the type of review process maintained and the financial commitment required by the IBO for school and district participation, the number of Texas schools and districts participating in the IB program has remained both low and virtually constant.

- Small numbers of students may make it more difficult for schools or districts to offer AP, IB, or other advanced courses. However, small districts have a history of collaborating to meet the educational needs of students. Also, solutions through technology, such as increased access to distance learning courses (e.g., TEA, T-STAR Information and Training Center, 1998), are becoming more of a reality.
- Schools with no recent or previous AP or IB examination experience may be at a disadvantage when compared to schools with prior experience, and must be allowed ample time and support to establish such programs.
- Percentages of all (public and non-public school) students taking AP examinations in most states remain quite low, and these percentages across states tend to increase with state percentages of 3-5 examination scores achieved. This suggests that there is still a great deal of untapped potential in student participation and performance among states, including Texas. Currently, the correlation between participation and performance percentages across Texas districts is negligible.
- Teacher training subsidies and equipment grants through the Texas AP/IB Incentive Program can help support establishment of AP and IB programs in a greater number of schools and districts, as well as expanding and improving existing programs.

RIGOR AND QUALITY OF AP AND IB COURSES SHOULD BE EXAMINED AND SUPPORTED.

Student examination performance is one type of check on the rigor and quality of AP and IB courses.

- If discrepancies in course grades assigned by teachers and scores obtained on AP and IB examinations are observed, they may point to a possible need for evaluation of the curriculum and instruction.
- Careful evaluation of student performance on various components of the AP and IB examinations may help identify areas needing improvement or better coverage in the curriculum.

- Discrepancies in examination performance among student groups (e.g., by ethnic group, gender, varying amounts and quality of academic preparation, previous examinations taken, etc.) should be examined so that supports (e.g., study guides, review sessions, extra tutoring, etc.), relevant teacher training, or curriculum and instructional changes can be considered.
- Based on studies from the College Board (e.g., College Board, AP Program, 1996; CEEB, Office of Research and Development, 1998), if semester-long (often known as block scheduling) rather than year-long (or traditional) schedules are used for AP courses, careful consideration and evaluation may be needed regarding the impact of schedule type, along with other factors, on student course and examination performance.

STUDENT PERFORMANCE IN AP AND IB COURSES SHOULD BE EXAMINED.

Analysis of TEA and College Board AP data continue to show increasing numbers and percentages of Texas examinees completing AP and other advanced courses during the same year, along with increasing numbers and percentages of AP and other advanced course completers who have taken AP examinations. Another study (Henderson, Winitzky, & Kauchak, 1996) has indicated that training teachers to most effectively prepare students in AP courses for AP examinations can have a major influence on how well students perform on the examinations. Extending such generalizations to IB examination performance is reasonable but can only be done on a tentative basis at best.

- Examinees who have taken the corresponding AP courses continue to outscore, on average, those who have not taken the corresponding courses. Thus, students who take AP courses should be encouraged to take the examinations and should be well informed about possible support available to help defray examination costs. (IBO policy usually does not permit students to take an IB examination unless they have taken the corresponding course.)
- Examinees who have had progressively rigorous academic preparation, along with progressively rigorous experience with examinations such as the PSAT/NMSQT, SAT I, and ACT, may have some advantage over students who have not the same type of preparation and experience.
- According to Henderson et al. (1996), effective teachers distribute and ask more questions of their students, spend a greater percentage of time on task during a class period, provide more assignments and greater amounts of feedback on those assignments, and create a learning environment that encourages higher participation by students when responding to questions. They also have more elaborated and organized knowledge structures of their subject matter than less effective teachers.

AP AND IB EXAMINATION PERFORMANCE SHOULD BE INTERPRETED RELATIVE TO COLLEGE SUCCESS.

AP and IB courses and examinations appear to be means to many critical longer term goals. Willingham and Morris' (1986) study of AP examinees revealed the following patterns.

- Students who earned scores of 3, 4, or 5 on AP examinations tended to excel in college to a greater degree than students who did not take the examinations. Such students were more likely to maintain a B average their freshman year and were more likely to graduate with academic honors. They were more frequently cited as leaders and as most successful overall. These students also were more often accepted to doctoral-level programs following undergraduate work than their non-AP peers.

- Students who earned more scores of 4 or 5 on their AP examinations tended to have higher scores on a college admissions test and to graduate in the top decile of their high school class. They also were more likely to graduate from college with top honors. Students who scored 1 or 2 on the AP examinations tended to do less well—for example, they were less likely to be among the top performers in high school and were less likely to graduate from college with honors.
- AP examinees were more likely to take more course work in the subject areas in which they were tested. In fact, they were also two to five times more likely to major in a subject area in which they were tested than were college students in general. Thus, taking a particular AP subject examination may indicate a special interest in that academic area.

SUBJECT-SPECIFIC, COLLEGE-LEVEL LEARNING FROM AP AND IB COURSES IS FOREMOST.

While the most important factor is whether or not students in AP or IB courses are experiencing subject-specific, college-level learning, performance on AP and IB examinations is the result of objective, external standardized measurement of how well students are likely to perform in the same courses taken in college. Thus, the quality and rigor of the advanced courses, the effectiveness of the teaching, and the availability of the AP or IB course and examination experience to an ever-increasing number and diversity of able and motivated students must be combined before these all important college-level learning experiences can occur. Ultimately, such higher-level learning should translate into a greater number of academically prepared Texas high school graduates, as well as graduates who are better prepared overall for the college and university experience.

*Comparability studies will determine appropriate course hours. American Council on Education will provide recommendations following their 1998 review.

TABLE A-4**Texas AP/IB Incentives through the 1998-99 Biennium***

Incentive Directed at School, Teacher, or Student	Incentive Description	Funded: Yes or No
School	A one-time \$3,000 equipment grant for providing a college-level Advanced Placement (AP) or International Baccalaureate (IB) course to be paid to a school based on need as determined by the commissioner.	No
School	\$100 for each student who scores a three or better on a college-level AP or four or better on an IB examination.	No
Teacher	Subsidized teacher training, not to exceed \$450 for each teacher, for a college-level AP or IB course.	Yes
Teacher	A one-time award of \$250 for teaching a college-level AP or IB course for the first time.	No
Teacher	A share of the teacher bonus pool, which shall be distributed by the teacher's school in shares proportional to the number of courses taught. Fifty dollars may be deposited in the teacher bonus pool for each student enrolled in the school who scores a three or better on an AP or four or better on an IB examination.	No
Student	A student receiving a score of three or better on an AP or four or better on an IB examination may receive reimbursement, not to exceed \$65, for the testing fee.	No
Student	A student is also entitled to a subsidy for a fee paid by the student to take an AP or an IB examination if the student demonstrates financial need. On approval by the State Board of Education, TEA may pay each eligible applicant an equal amount, not to exceed \$25 for each applicant.	Yes

Data Sources: TEC (1997), §28.052-28.054 and Rider 34 of the Appropriations Act, Article III – Education, 75th Texas Legislature.

*Effective with the 1999-2000 school year, additional incentives will be funded. (See TEA correspondence from the commissioner dated 8/26/99 at <http://www.tea.state.tx.us/taa/aas990826.html>.)

Data Source: TEA summary analyses of Texas public school examination data files provided in 1997 by the IBO in Cardiff, Wales, Great Britain. Excluded above are subject examinations with fewer than five examinees, as well as satisfactory Theory of Knowledge (TOK) Course and Essay completions, which are required for the IB diploma but are excluded in TEA accountability system reporting of AP and IB subject examinations. There were 158 examinees with valid scores on the TOK exam; 147 examinees had valid scores on the essay examination.

*Subjects with both Higher Level (HL) and Subsidiary Level (SL) examinees in 1997.

APPENDIX B

1997 TEXAS AP AND IB RESULTS BY DISTRICT

NOTES ABOUT TABLES IN APPENDIX B

RESULTS AND NOTES LISTED IN TABLES

The AP examination results listed for each district in Table B-1 include: the 1996-97 total number of students enrolled in Grades 11-12, number and percent of 11th- and 12th-graders who took at least one AP examination, number and percent of examinees with at least one score of 3-5, total number of examinations taken, number and percent of AP examinations with scores of 3-5, and a "note" column for district-specific comments. Similarly, IB results are listed by district in Table B-2; however, columns pertaining to the number and percent of examinees and examinations refer to scores within a 4-7 range.

More specifically, AP score data for districts are not listed in Table B-1 when the number of students with scores is less than five because of the instability of statistics based on such low numbers of scores. A "< 5-masked*" note is printed for districts with fewer than five students tested. This precaution also helps to ensure that single sets of scores cannot be identified or linked with any individual. Districts with no 11th or 12th-graders tested received a "none tested" note. In contrast, Table B-2 only lists the 9 districts with IB examinees. In both Tables B-1 and B-2, districts with five or more examinees but with fewer than five scores of either 3-5 for AP or 4-7 for IB were given a "< 5-masked+" comment. Some IB examination scores for one district in Table B-2 were pending as of September 3, 1997, and were thereby masked with a "< 5-masked+" note because of incomplete score results.

SOURCES OF DATA FOR TABLES

Texas data were obtained from the College Board via its contractor, the Educational Testing Service, on 34,075 students who took one or more AP examinations in May 1997. Similarly, Texas data were obtained from the International Baccalaureate Organisation in Cardiff, Wales, Great Britain, on 685 Texas students who took IB examinations in May 1997. District results included 32,071 AP examinees and 619 IB examinees with valid scores who were 11th- and 12th-graders enrolled in Texas public high schools in 1996-97. Some of the IB examination scores were pending in one district as of September 3, 1997. Data on enrollment for students who were *not* receiving special education services and their grade levels were obtained from TEA's Public Education Information Management System (PEIMS). When grade level on an AP examinee was not available from PEIMS, it was obtained from the AP examinee data file. PEIMS data were also used to distinguish public from non-public school data. Because Texas public school AP results include Grade 11-12 examinees only and are based on PEIMS identification of Texas public schools, College Board summaries of Texas public school AP results may vary somewhat from those published by TEA. The IBO publishes no comparable summaries of Texas IB examination results.

*NOTE: SCORES IN DISTRICTS WITH FEWER THAN 5 EXAMINEES ARE MASKED (SEE PAGE 39 ABOUT TABLE NOTES).

+NOTE: DISTRICTS WITH 5 OR MORE EXAMINEES BUT FEWER THAN 5 SCORES OF 4,5,6,OR 7 ARE MASKED.
SOME OF THE EXAMINATION SCORES WERE PENDING AS OF SEPTEMBER 3, 1997.

APPENDIX C
1997 TEXAS AP AND IB RESULTS
BY DISTRICT ANALYZE CATEGORIES

Appendix C

NOTES ABOUT TABLES IN APPENDIX C

RESULTS AND NOTES LISTED IN TABLES

Tables C-1 and C-3 present AP program statistics and Table C-2 presents IB statistics when the district data are aggregated into 25 types of groupings of districts with similar characteristics as defined in the Glossary and by TEA's ANALYZE program. From these, results start with district enrollment groupings and end with groupings of the district percentage of teachers with an advanced degree. Table C-1 shows the number and percentage of districts with and without AP examination participation by each of the 25 types of groupings of district characteristics, while Table C-2 shows how the nine districts with IB examination participation are distributed across the 25 types of district ANALYZE groupings. In Table C-3, these groupings allow examination of, by the various district characteristics, the percentage of 11th- and 12th-graders taking at least one AP examination and the percentages of both examinees and examinations with scores of 3-5.

SOURCES OF DATA FOR TABLES

Texas data were obtained from the College Board via its contractor, the Educational Testing Service, on 34,075 students who took one or more AP examinations in May 1997. Similarly, Texas data were obtained from the International Baccalaureate Organisation in Cardiff, Wales, Great Britain, on 685 Texas students who took IB examinations in May 1997. District results included 32,071 AP examinees and 619 IB examinees with valid scores who were 11th- and 12th-graders enrolled in Texas public high schools in 1996-97. Some of the IB examination scores were pending in one district as of September 3, 1997. Data on enrollment for students who were *not* receiving special education services and their grade levels were obtained from TEA's Public Education Information Management System (PEIMS). When grade level on an AP examinee was not available from PEIMS, it was obtained from the AP examinee data file. PEIMS data were also used to distinguish public from non-public school data. Because Texas public school AP results include Grade 11-12 examinees only and are based on PEIMS identification of Texas public schools, College Board summaries of Texas public school AP results may vary somewhat from those published by TEA. The IBO publishes no comparable summaries of Texas IB examination results.

GLOSSARY OF 1996-97 ANALYZE CATEGORY DESCRIPTIONS

Glossary

TEXAS EDUCATION AGENCY
1996-97 ANALYZE CATEGORY DESCRIPTIONS
(IN ORDER OF APPEARANCE IN TABLES C-1 THROUGH C-3)

Enrollment Groupings

A nine-category grouping based on the total number of students enrolled by district as of the Public Education Information Management System (PEIMS) fall collection date (late October of each year). Enrollment excludes students who are served but not enrolled by districts.

District Type

Besides the separate charter school district category, classification of school districts based on factors such as size, growth rates, and proximity to urban areas follows:

Major Urban. The state's largest metropolitan districts serving the Houston, Dallas, San Antonio, Fort Worth, Austin, and El Paso areas.

Major Suburban. Other districts in and around the major urban areas.

Other Central City. Major districts in other large Texas cities.

Other Central City Suburban. Other districts in and around the other large, but not major, Texas cities.

Independent Town. Largest districts in counties with populations of 25,000 to 100,000, or the number of students enrolled is greater than 75 percent of the largest district.

Non-Metro: Fast Growing. Districts not fitting in any of above categories but exhibiting a five-year growth rate of at least 20 percent with at least 300 students enrolled.

Non-Metro: Stable. Districts not fitting any of above categories but with an enrollment exceeding the state median.

Rural. Districts not fitting any of above categories; districts either with an enrollment between 300 and the state median and a growth rate less than 20 percent, or with an enrollment less than 300.

Charter Schools. The 16 open-enrollment schools chartered by the State Board of Education for operation during 1996-97. Charter schools operate in a commercial or nonprofit entity facility or in a school district.

Property Wealth

Total taxable property value divided by enrollment, which indicates district ability to raise local funds on a per pupil basis. The property value used is total taxable value for the last completed calendar year—i.e., 1996, as determined by the Comptroller's Property Tax Division (CPTD). Enrollment is for the 1996-97 school year. The first wealth grouping shows 10 categories; the second simply shows districts above and below state average wealth; the third is a 20-category grouping with each category representing about five percent of the state's students. The six special statutory districts and charter school districts without taxable property wealth form a separate group in all three wealth groupings.

Total Tax Effort

A four-category tax effort grouping of districts defined by the total effective tax rate, which was determined by dividing the last completed calendar year's total levy amount by that year's CPTD total taxable property value. The total effective rate is the sum of the school district Maintenance and Operations (M&O) rate and the Interest and Sinking Fund standardized rate. Rates are expressed per \$100 of taxable value. The six special statutory districts and charter school districts without property tax levies appear separately.

Maintenance and Operations Effective Tax Rates

A four-category tax effort grouping of districts showing the M&O effective tax rate, which was determined by dividing the last completed calendar year's M&O levy amount by that year's CPTD total taxable property value. The M&O rate shown includes the local standardized rate and money generated by districts for equalizing wealth. The six special statutory districts and charter school districts without property tax levies appear separately.

Highest Property Value Category

A four-category CPTD classification based on property use. Thirteen CPTD categories are aggregated into four categories as follows:

Residential. Single-family, multi-family, and residential inventory.

Land. Vacant lots and rural real (taxable).

Oil and Gas. Oil, gas, and minerals.

Business. Commercial and industrial real, commercial and industrial personal, and utilities.

A district is placed into one of the four categories above that represents its greatest total property value. The six special statutory districts and charter school districts without taxable property wealth form a separate group.

Small/Sparse Adjustment

A four-category grouping of districts based on the small/sparse adjustment amount as a percent of the total adjusted basic allotment amount. A fifth category contains all districts receiving no small/sparse adjustment. This percentage represents the extent to which state funding is adjusted to compensate for small and/or sparsely populated districts.

Cost of Education Index Level

A five-category grouping of districts based on the Cost of Education Index (CEI) level. It reflects geographic variations in costs and prices outside district control. The current index, which has a minimum value of 1.0 and maximum of 1.2, was implemented in 1991-92.

Operating Cost Per Student

A five-category grouping of districts based on operating cost per student. Operating costs are the sum of all expenditures budgeted for the operation of the district for all funds. The operating expenditures are a subset of the total expenditures; they do not include debt service, capital outlay, or ancillary services expenditures. Per student amounts are the school year expenditures divided by enrollment. The source for budgeted expenditures is the fall PEIMS submission.

Education Service Center Region

The state is divided into 20 geographic regions. Districts within each region are served by an Education Service Center, which in most cases is in the same geographic region within which the district is located.

TAAS: Percent Passing All Tests Taken

A five-category grouping of districts based on the percent passing the Texas Assessment of Academic Skills (TAAS). For Grades 3-8 and 10, the total number of students passing all sections taken of the TAAS is expressed as a percentage of the total number of students taking one or more tests. This percentage excludes special education students and third- through sixth-graders taking the test in Spanish and includes only those students in the district in October of the school year, which is the percentage used for accountability purposes. A sixth category is reserved for districts not administering the test.

SAT I/ACT Percent Taking

A three-category grouping based on the percent of 1995-96 graduates taking the SAT I and/or the ACT Assessment. A fourth category is reserved for districts that had no graduates.

SAT I/ACT Percent Scoring At or Above Criterion

A five-category grouping based on the percent of 1995-96 examinees who scored at or above the criterion (1110 on SAT I Total and/or 24 on ACT Composite) on the SAT I and/or ACT. The number meeting the criterion is divided by the number of examinees. A sixth category is reserved for districts that had no examinees.

Student Density

A four-category grouping based on density, or the number of students enrolled per square mile. District square miles were determined through a joint effort by the State Property Tax Board (SPTB, now the CPTD), the Texas Education Agency, and the Texas Water Commission (TWC). Maps provided by districts to the SPTB (now CPTD) were digitized by the TWC to determine acreage. The six special statutory districts and charter school districts without available mileage information form a separate group.

Enrollment Change from Prior Year

A five-category grouping based on the growth or decline in district student population over a one year period. Districts with declining enrollment represent one category, while remaining categories show one-year growth rates ranging from "0% to 3%" to "10% and over."

Percent African American, Hispanic, and Minority Students

Three six-category sets of groupings according to the ethnic composition of district student populations, as reported on PEIMS. Minority percent is calculated as the sum of all non-White populations expressed as a percentage of the total. Non-White populations include American Indian or Alaskan Native; Asian or Pacific Islander; African American, not of Hispanic origin; and Hispanic.

Percent Economically Disadvantaged Students

A six-category grouping according to the district percentage of enrolled students classified as economically disadvantaged on PEIMS as follows:

- a) Eligible for free or reduced-price meals under the National School Lunch and Child Nutrition Program;
- b) From a family with annual income at/below the federal poverty line;
- c) Eligible for AFDC or other public assistance;
- d) Recipient of Pell Grant or comparable state need-based financial assistance program; or
- e) Eligible for programs assisted under Title II of the Job Training Partnership Act.

Average Teacher Experience

A four-category grouping of average teacher experience years computed as the total professional experience years for each district teacher, multiplied by each teacher's full-time-equivalent (FTE) count, followed by summing these products for the whole district, and dividing by the total teacher FTE count.

Average Teacher Salary

A four-category grouping by average district teacher salary computed as the total salary of teachers divided by the total teacher FTE count. Total salary amount does not include any other supplement.

Percent Minority Teachers

A six-category grouping according to the minority composition of district teaching populations. Minority percent is calculated by summing all non-White teacher FTEs and dividing by the total teacher FTEs.

Percent Teachers with Advanced Degrees

A four-category grouping by district percentage of teachers with advanced degrees computed as the FTE count of teachers with a master's or doctoral degree divided by the total teacher FTE count.

COMPLIANCE STATEMENT

TITLE VI, CIVIL RIGHTS ACT OF 1964; THE MODIFIED COURT ORDER, CIVIL ACTION 5281, FEDERAL DISTRICT COURT, EASTERN DISTRICT OF TEXAS, TYLER DIVISION

Reviews of local education agencies pertaining to compliance with Title VI Civil Rights Act of 1964 and with specific requirements of the Modified Court Order, Civil Action No. 5281, Federal District Court, Eastern District of Texas, Tyler Division are conducted periodically by staff representatives of the Texas Education Agency. These reviews cover at least the following policies and practices:

- (1) acceptance policies on student transfers from other school districts;
- (2) operation of school bus routes or runs on a nonsegregated basis;
- (3) nondiscrimination in extracurricular activities and the use of school facilities;
- (4) nondiscriminatory practices in the hiring, assigning, promoting, paying, demoting, reassigning, or dismissing of faculty and staff members who work with children;
- (5) enrollment and assignment of students without discrimination on the basis of race, color, or national origin;
- (6) nondiscriminatory practices relating to the use of a student's first language; and
- (7) evidence of published procedures for hearing complaints and grievances.

In addition to conducting reviews, the Texas Education Agency staff representatives check complaints of discrimination made by a citizen or citizens residing in a school district where it is alleged discriminatory practices have occurred or are occurring.

Where a violation of Title VI of the Civil Rights Act is found, the findings are reported to the Office for Civil Rights, U.S. Department of Education.

If there is a direct violation of the Court Order in Civil Action No. 5281 that cannot be cleared through negotiation, the sanctions required by the Court Order are applied.

TITLE VII, CIVIL RIGHTS ACT OF 1964 AS AMENDED BY THE EQUAL EMPLOYMENT OPPORTUNITY ACT OF 1972; EXECUTIVE ORDERS 11246 AND 11375; EQUAL PAY ACT OF 1964; TITLE IX, EDUCATION AMENDMENTS; REHABILITATION ACT OF 1973 AS AMENDED; 1974 AMENDMENTS TO THE WAGE-HOUR LAW EXPANDING THE AGE DISCRIMINATION IN EMPLOYMENT ACT OF 1967; VIETNAM ERA VETERANS READJUSTMENT ASSISTANCE ACT OF 1972 AS AMENDED; IMMIGRATION REFORM AND CONTROL ACT OF 1986; AMERICANS WITH DISABILITIES ACT OF 1990; AND THE CIVIL RIGHTS ACT OF 1991.

The Texas Education Agency shall comply fully with the nondiscrimination provisions of all federal and state laws, rules, and regulations by assuring that no person shall be excluded from consideration for recruitment, selection, appointment, training, promotion, retention, or any other personnel action, or be denied any benefits or participation in any educational programs or activities which it operates on the grounds of race, religion, color, national origin, sex, disability, age, or veteran status (except where age, sex, or disability constitutes a bona fide occupational qualification necessary to proper and efficient administration). The Texas Education Agency is an Equal Opportunity/Affirmative Action employer.

II. REPRODUCTION RELEASE: *This is the State Department of Education for Texas. Please use this corporate entry without personal author.

In order to disseminate as widely as possible timely and significant materials of interest to the educational community, documents announced in the monthly abstract journal of the ERIC system, *Resources in Education* (RIE), are usually made available to users in microfiche, reproduced paper copy, and electronic media, and sold through the ERIC Document Reproduction Service (EDRS). Credit is given to the source of each document, and, if reproduction release is granted, one of the following notices is affixed to the document.

If permission is granted to reproduce and disseminate the identified document, please CHECK ONE of the following three options and sign at the bottom of the page.

The sample sticker shown below will be affixed to all Level 1 documents

PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL HAS BEEN GRANTED BY

Sample

TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)

1

Level 1

Check here for Level 1 release, permitting reproduction and dissemination in microfiche or other ERIC archival media (e.g., electronic) and paper copy.

The sample sticker shown below will be affixed to all Level 2A documents

PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL IN MICROFICHE, AND IN ELECTRONIC MEDIA FOR ERIC COLLECTION SUBSCRIBERS ONLY, HAS BEEN GRANTED BY

Sample

TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)

2A

Level 2A

Check here for Level 2A release, permitting reproduction and dissemination in microfiche and in electronic media for ERIC archival collection subscribers only

The sample sticker shown below will be affixed to all Level 2B documents

PERMISSION TO REPRODUCE AND DISSEMINATE THIS MATERIAL IN MICROFICHE ONLY HAS BEEN GRANTED BY
